

Ontario International Airport Modernizes Finance Operations with The Groove

AMS implementation streamlines finance and payroll processes

Location
Ontario, CA

Workday Footprint
Full Platform: HCM, Payroll,
Financials

The Groove Services
Application Managed Services,
FDM Assessment & Remediation,
Phase X Application Deployment

THE CHALLENGE

With financial data spread across ledgers, posting rules, spend categories, and project and grant tracking, the organization lacked a unified view. This created reporting inconsistencies, category mismatches, and made it harder for leaders to gain clear financial insight.

BENEFITS

Improved Payroll Close Process

Reduced payroll close time and improved accuracy through standardized reconciliation reports and dashboards.

Faster Project and Grant Deployment

Streamlined setup and governance for projects and grants with a modernized Foundational Data Model.

THE SOLUTION

Through The Groove's AMS, we are systematically addressing a wide range of system-wide and client-specific challenges to drive operational efficiency and improve user experience. Key components include:

- **Audit Log Configuration**
Configured and standardized audit logs across systems to ensure accurate tracking and compliance.
- **Foundational Data Model Optimization**
Reorganized and refined FDM structures to support consistent reporting and enable scalable project and grant tracking.
- **Supplier Invoice Enhancements**
Developed and deployed enhancements to invoice processing workflows, reducing manual steps and improving reliability.
- **Payroll Close Process Improvements**
Introduced standardized reconciliation reports, dashboards, and guided checklists to make the payroll close process more structured and repeatable.
